PRODUCTS: MODULAR PROTOTYPING AND PREDEVELOPMENT SYSTEM „BUILD-RS"

ARRK

Predevelopment and prototyping platform for rapid and cost-effective prototypes of electronical systems. This system is easy expandable and provides enough power to perform complex tasks.

OBJECTIVE:

The BUILD-RS modules make it possible to build complete systems in a quick and cheap way. Stability, testability and modular expandability form the basis and the compact design makes integration into the target system easy. A software middleware allows for flexible configuration/application.

FEATURES:

— Communication: CAN, LIN, PWM, SPI, I^{2}C

— Flexible connection for customized solutions

— Many standard modules: motor control, digital inputs and outputs
